Editorial

Dear Reader, welcome to this largest ever issue of *Parabola*!

It is a real pleasure to present nine excellent and diverse articles, by authors in six countries around the world, the most articles and countries of origin of any *Parabola* issue in its 58-year history.

What impresses me most about these articles is that they nearly all contain original maths created by their authors. This is a beautiful demonstration of how maths is a game that everyone can play - and of how you don't need to be a professional mathematician to create new and beautiful maths. I hope that you, dear Reader, might feel inspired to create your own original new maths. If so, then please feel very welcome to contribute it for possible publication in *Parabola*!

In addition to these articles, there are also ten problems, beautifully crafted by David Angell, Sin Keong Tong and Mircea Voineagu. These are really elegant and enjoyable problems, and I hope that you will enjoy them as much as I did!

Warm regards to you all, and please enjoy this issue of *Parabola*!,
Thomas Britz
